

Signed PGA sensitivity to catalogue depth
Comparison catalogue minus gWFM: positive = higher PGA; negative = lower PGA

Near-field sign balance (0-25 km)
gCMT (n=28): 85.7% lower | 0.0% unchanged | 14.3% higher
ISC-EHB (n=28): 64.3% lower | 10.7% unchanged | 25.0% higher

Dots: event-receiver pairs. Line: 15 km Gaussian-weighted mean (systematic signed tendency). Shading: ± 1 weighted SD.
The shading is observed pair-to-pair variability; no random ground-motion uncertainty was sampled.
