

Signed structural-loss sensitivity to catalogue depth
Comparison catalogue minus gWFM: positive = higher loss; negative = lower loss

Near-field sign balance (0-25 km)
gCMT (n=28): 21.4% lower | 71.4% unchanged | 7.1% higher
ISC-EHB (n=28): 21.4% lower | 71.4% unchanged | 7.1% higher

Dots: event-receiver pairs. Line: 15 km Gaussian-weighted mean (systematic signed tendency). Shading: ± 1 weighted SD.
The shading is observed pair-to-pair variability; no random ground-motion uncertainty was sampled.
